Altered Dragster frame as built.

From zero to 270 km/h in 7.9 seconds and just in 402 meters of travel. That is our target and to do that, we will need about 800 horsepower!

Hollow Heads Drag Team will participate in to Finnish Championship Drag Race series during the season 2014.

Team uses a fiberglass Ford T-23 bodied Altered Dragster chassis as a race car and it is powered by twin turbocharged 292 cubic inch displacement Ford Y-block V8 engine.

The driver of the car is 55 years old Jyrki Peltonen. Other members of the team are Crew Chief Seppo Kokko, who is the primary builder of the car and Simo Olkkonen, who carries responsibility about cars electrics and electrically controlled fuel management systems.

We are looking for a sponsor to achieve our goals in Drag racing. Primary goal is to perform as good as possible in the Finnish Drag Racing series, but we are also planning to beat old World Record that is driven with Ford Y-block engine at USA during the summer of 2010 by Bob Lindsay of Oregon. The old record is 7.966 seconds at a quarter mile with the top speed of 270 km/h. However, we will run under that time, someday... So far our best result is 8.723 sec and 242 km/h.

So, what can we offer to you?

We offer visibility in one of the fastest growing motorsport in Europe and particularly in Finland. Advertising space in sides of our race car and our race car hauler. Drag racing is easy to watch and easy to enjoy from grand stands and also easy to explore at the pit area. Clean and beautiful race cars, race car haulers and race bikes gather crowds of people around them and you and your products will be noticed immediately.

Interested? If so, please contact us and and let's make a deal that will benefit us both.
